Localizes primarily at the cell surface (By similarity). SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE TRANSPORTER SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        . Biol. Cell 6:1575-1589(1995).

FUNCTION: FACILITATIVE GLUCOSE TRANSPORTER. THIS ISOFORM MAY BE RESPONSIBLE FOR CONSTITUTIVE OR BASAL GLUCOSE UPTAKE. HAS A VERY BROAD SUBSTRATE SPECIFICITY; CAN TRANSPORT A WIDE RANGE OF ALDOSES INCLUDING BOTH PENTOSES AND HEXOSES (BY SIMLLARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PS00216; SUGAR_TRANSPORT_1; 1. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The cDNA was isolated from a human liver cell cDNA library, and from tissue localisation studies has been found to be expressed only in the liver. The protein has homology with the rat organic cation transporter (EMBL Accession No. V09945) which is involved in drug excretion, and may have a similar function. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are

          domains. The cDNA was isolated from a human liver cell cDNA library, from tissue localisation studies has been found to be expressed only the liver. The protein has homology with the rat organic cation transporter (EMBL Accession No. V09945) which is involved in drug excretion, and may have a similar function. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors,

Cells transformed with these nucleotides may be used to screen for agonists and antagonists which appotentially useful therapeutically.
                                                                                                                                                                                                                                                                                                               667
                                                                                                                                                                                                                                                                                                                                                                                                                   547

                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA

```
cc haematopoiesis regulatory activity; tissue growth activity;
cc immunomodulatory activity; activity; activity;
cc immunomodulatory activity; activities; haemostatic, thrombotic or
cc thrombolytic activities; receptor or inhibin-related activities;
cc the involved in oncogenesis, cancer cell proliferation or metastasis.
cc Depending on their biological activities, polypeptides and nucleotides of
cc the invention are useful for preventing, treating or ameliorating medical
cc conditions, e.g., by protein or gene therapy. Such conditions include
cc cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell
cc disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
cp of birns, bone disorders (e.g., osteoporosis), and abnormal
cc vascular growth. Polypeptides involved with tissue regeneration and
cc repair (or nucleic acids encoding them) may be used to promote wound
cc healing (e.g., of burns, incisions and ulcers), while those with
cc batterial and fungal infections in addition to immune disorders.
                                          Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention or have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Tang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 677; 1963pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human proteins and DNA encoding sequences useful for preventing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                YT,

                                                                                                                                                                                                                                                                                                                                                                                                    18-JAN-2001.
                                   transporter (hOAT) polypeptides. hOAT polypeptides are preferentially transporter that facilitate the transport of organic anions across the proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary corteritary active transport involving exchange of another organic anion. Or tertiary active transport involving exchange of another organic anion. HOAT2A and hOAT2B are thought to be splice variants as they are noward and hOAT2B are thought to be splice variants and the DNA identical except at the C-terminal end. hOAT proteins and the DNA identical except at the C-terminal end.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunosuppressant and cytostatic activity. The polypoptide or polypucleotides are useful in gene therapy. A composition containing a polypoptide or polypucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous and central nervous system diseases, such as lateral sclerosis, and shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and shy-Drager Syndrome. Other uses include the activity, cancer diagnosis and thrapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

Novel human transporter and ion channel proteins useful for treating P-PSDB; AAE04897. Baughn MR, Burford N, Hillman JL, Azimzai Y, 2001-418042/44. Khan FA; Au-Young J, Lu DAM, Yue H, Nguyen DB, Yang J, Yao MG,

Claim 5; Page 147; 160pp; English. preventing transport, neurological, muscle and immunological

PAN XXX PAN XX disease, Duchenne muscular dystrophy, angina and hypertension, neurological disorders including Alzheimer's disease, amnesia, bipolar The present sequence is transporter and ion channel-10 (TRICH-10) cDNA. TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, cystic fibrosis, Becker's muscular dystrophy, Charcot-Marie Toth cystic fibrosis, Becker's muscular dystrophy. epilepsy, ischaemic cerebrovascular

                                                                                                                                                                                                                                   δÃ
                                                                                                                                                                                                                                                                                                                                                                                           CC AAC61879-93 encode secreted human proteins. The secreted proteins are CC useful in assays to determine their biological activities. The proteins CC can also be used as biomarkers to identify tissues or cell types which CC express the proteins. The polynucleotide molecules can be used as CC The proteins and antibodies are useful in diagnosis and treatment of CC diseases associated with altered expression of these proteins. The CC discases associated with altered expression of these proteins are also useful for prevention or treatment of platelet CC disorders, stem cell disorders, osteoporosis or osteoarthritis, burns, CC incisions, ulcers, periodontal diseases, central and peripheral nervous CC system diseases and neuropathies, for healing fractured bones and to CC induce cartilage and/or bone growth in cosmetic plastic surgery. The CC proteins are also useful for gut protection or regeneration, for the CC treatment of lung or liver fibrosis, for stimulating blood cell CC generation in patients receiving cancer chemotherapy and for treatment of the marrow transplantation patients.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                           The sequences given in AAC65819-24 encode human organic anion transporter (hOAT) polypeptides. hOAT polypeptides are preferentially expressed in the liver and kidneys of humans. OAT's are membrane proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary or tertiary active transport involving exchange of another organic anion hOAT2A and hOAT2B are thought to be splice variants as they are identical except at the C-terminal end. hOAT proteins and the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAC85823 standard; DNA; 1977

```
The present sequence is human protein with hydrophobic domain encoding CC CDNA clone Hp03613. The polynucleotide and polypeptide of the invention CC associated with inappropriate polypeptide expression. The polynucleotides CC into a host cell and culturing the cell to express the protein. The CC polynucleotides and its complementary sequences may also be used as DNA CC probes in diagnostic assays and also used in gene therapy. The CC and in assays to identify modulators of polypeptide expression and CC and in assays to identify modulators of polypeptide expression and CC supplements, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of Theumatoid arthritis and insulin dependent diabetes), to modulate complements to modulate tissue growth activity (e.g. for the cc disease), to modulate activin and inhibin activity (e.g. for the creatment of parkinson's disease, Huntington's disease and Alzheimer's cfertility), to modulate chemotactic and chemokinetic activity, to modulate receptor indulate haemostatic and thrombolytic activity, to modulate receptor to the turnour growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human proteins with hydrophobic domains and the nucleic acids encoding them, useful for preventing diagnosing and treating e.g. cancer, Alzheimer's and inflammation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 4; Page 252-257; 563pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens.
                                                                                                                                                                                                                            The present sequence is a cDNA encoding human transporters and ion channels (TRICH-13) protein. The TRICH DNA, protein and their agonist and antagonists are useful in the diagnosis, treatment and prevention of transport disorders (akinesia, amyotrophic lateral sclerosis, cystic fibrosis), neurological (Alzheimer's disease, dementia, depression, epilepsy), muscle (e.g. cardiomyopathy, Becker's muscular dystrophy) or immunological disorders (e.g. allergies, acquired immunodeficiency syndrome (AIDS), Crohn's disease, rheumatoid arthritis, scleroderma, multiple sclerosis), viral, bacterial, parasitic, protozoal and helminthic disorders, cancer, anaemia, asthma, trauma, haemodialysis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-FEB-2001; 2001WO-US05942
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Thirteen human transporters and ion channels (referred to as TRICH-1 to TRICH-13), useful in the diagnosis, treatment and prevention of transport (e.g. akinesia), neurological, muscle or immunological disorders (e.g. allergies) -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polynucleotides and its complementary sequences may also be used as DNA probes in diagnostic assays and also used in gene therapy. The polypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators of polypeptide expression and activity. The polypeptides and nucleic acids may be used as nutritional

                                                                                                                                                                                                                                                                                                     The present sequence encodes a human placental organic anion transporter designated OAT4. OAT4 has nephrotrophic activity. The OAT4 protein and encoded gene are useful in studying causes of abnormality, including the application of a variant nucleic acid as a probe to detect the presence of a gene encoding the transporter OAT4, or to identify or quantify such gene, and in developing drugs to prevent or treat various kidney diseases and abnormal foetal growth.
